CSE 197 is offered by UC San Diego to augment students' internship experiences and to allow students to earn academic credit. The course is designed to identify and deepen the connections between UC San Diego coursework and real world problems. Students reflect on the development of their professional, problem-solving, and technical skills throughout their internships. The course activities will include:

- Weekly written reflections on the student's work, to be shared with peers.
- A final poster presentation highlighting a key achievement in the internship and reflecting on the student's learning.

Students require the permission of their internship supervisor to participate in CSE 197. Your signature indicates your consent for the student's participation in CSE 197, under your supervision.

We are sensitive to the needs of companies to keep proprietary or private information confidential. Students are required to consult their supervisors about any relevant disclosure rules and safeguards. If you have concerns or special requirements that will impact this student's participation in CSE 197, please contact me as soon as possible at minnes@eng.ucsd.edu.

Student name: _RYAN TIJO_

Company: _QUALCOMM INC._

Internship supervisor name: _SUNIL KUMAR_
